EXTERNAL CENTRAL HOLOGRAPHIC OUTPUT

At the moment it seems like we interact with computers in a very unnatural and very two dimensional way. Casual users and specialists try to create and interact with three dimensional objects using two dimensional tools such as keyboard and mouse. It doesn't feel completely natural and doesn't give you the full picture to analyze or a solid medium to work and experiment with.

INFORMATION

TENDER

da Vinci ^{HD}
SURGICAL SYSTEM

So if we integrate gestural technology and provide real time feedback for the purposes of manipulating objects on a multidimensional plane, will it provide greater and natural immersion into the design process?

INTRODUCING ECHO

ECHO is an interactive smart table. An experimental peripheral device and concept that focuses on using 3D gestural technology to interface with traditional computer programs and systems. Creating and interacting with complex objects in multiple dimensions.

PROTOTYPE

A smartphone is shown on a glowing blue circular surface. Below it, on a dark surface, is a glowing red outline of a smartphone. The text "TO TURN ON WIFI & BLUETOOTH TO CONNECT PLACE DEVICE ON TABLE" is projected onto the dark surface.

TO TURN ON WIFI & BLUETOOTH

HOLOGRAPHIC SMART DESK

Being able to manipulate objects in three dimensional space provides a larger picture to analyze and work with. It provides a newer sensation in interacting with complex digital objects, but not necessarily more natural which was what I was aiming to achieve.

THANK YOU
